Trans. of Przemysl Chemiczny (Poland) 1961, v. [17](40) no. 4, p. 203-206.

DESCRIPTORS: *Mercury, *Electrolysis, Sodium compounds, Chlorides, Solvent action, Electrochemistry

Losses of mercury in brine occur both during the electrolysis process and when the current is turned off. The main losses of mercury occur in salt slimes and in brines drawn off during circulation. These saline slimes and brines contain both dissolved and undissolved mercury. The amounts of mercury include various concentrations of mercury in the brines, accumulating in the tank and left behind in the saline slimes.

National Aeronautics and Space Administration.
THE EFFECT OF THE BEHAVIOR OF THE LOAD ON THE FREQUENCY OF THE FREE VIBRATIONS OF A RING. E. B. Wasserman. January 1961. 20p. OTS price, $0.50.
(NASA TECHNICAL TRANSLATION F-52. Translation from Voprosy Dinamiki I Dinamicheskoi Prochnosti, no. 4, 1956, p. 49-71 (USSR)

The problem of free, plane and three-dimensional small-amplitude vibrations of radially loaded flexible circular rings is investigated. Differential equations are derived from three types of behavior of the load during deformation. Expressions are obtained for the frequencies and critical loads. Examples of rings with circular, tubular, square, and rectangular cross sections are given.
